

Fyodor Khruschov

*Senior Front-End developer
(Remote)*

I'm a front-end developer with 5+ years experience. I worked with Angular 1, VueJS, Polymer frameworks using basic front-end set up (bower, gulp etc).

I Developed several large and complex projects in team of 1 – 5 front-end developers (and up to 15 people on the project) using scrum methodology, continuous integration and covering code with unit tests.

Now I'm learning React and React Native to be up to date with front-end present and looking forward to work on cool project based on this framework. I prefer media startup projects (dealing with music, photos, videos etc) to join.

Location - Minsk (Belarus)

Age - 26

Main technologies

- ES5, ES6, frameworks and libraries (jQuery, Angular 1, VueJS, PolymerJS, ReactJS)
- Developing tools (Bower, Webpack, Gulp, Yeoman, Jenkins)
- Testing tools (Karma, Mocha, Jasmine)
- HTML, CSS, Bootstrap, Git, REST, CI

Also have some knowledge in:

PHP, MySQL, MongoDB + MongooseJS, Photoshop, Heroku, Node + ExpressJS

Work history

Corporate Services Platform (16 month) – Web platform to handle company's full-suite of regulatory fillings – incorporation, taxes, immigration, licenses, compliance. Ability to manage company information, collaborate with team through self-service portal, initiate and track progress requests in real-time. I was developing front-end part and worked with team of front-end and backend developers, test-unit and app-devs teams. Participated in daily scrum meetings. Communicated on Skype with teammates.

I worked on core engine which generates HTML form from JSON. Developed many form controls: grid, radio, document, button, WYSIWYG editor and so on. Each of controls list might work with complex condition expressions (hidden, required, read only expressions) Created big amount of application sections such as: tasks list pages, admin pages, multiple users lists. Most of them are interfaces for end user to work on some REST entity. Worked on application-level UI parts: navigation menu, profile menu, messages (notifications) system, fetching (loader) parts and so on. Implemented payment system with complex tax collecting conditions. Integrated BrainTree and Stripe services to collect and store credit card details. Worked on fixing legacy bugs.

Worked with a scrum methodology, 2-weeks long sprints, continuous integration on 3-5 different environments (dev, qa, stage, production..), used JIRA as management tool.

Technologies and tools: Polymer, Gulp, Bower, Git, HTML, CSS, LESS, REST, Jenkins.

Spicy Escorts (6 month) - social platform. The goal is to connect guys with local girls (or girls with local guys :)). The project is based in Thailand. I created about 60% of responsive UI (the app is very mobile oriented), developed front-end part of text chat. Chat is using QuickBlox App as a cloud backend and database. Chat features: multiple chat windows on the screen, chat-dialogs page, mark as reading, sending images, offline messages. Worked in team of one front-end developer (layout engineer), two backend guys and a manager. App is working in Thailand. Product owner planned to launch app in USA and Singapore.

Technologies and tools: JQuery, VueJS, QuickBlox SDK, Bootstrap, Gulp, Bower.

IsItUp (6 month) – Assets Management system. The goal of the application is to track all devices of the company, manage it's parameters (name, category, status, license, warranty, purchase or lease info, ownership etc). Application support many user roles, has it's own admin panel and panel for data entry staff (special team which is filling in assets data).

I developed whole front-end from scratch as lead developer. Worked in team of 3 backend developers, few managers and QA team.

Technologies and tools: AngularJS, Bootstrap, Gulp, Bower, Bitbucket, NVD3.
Backend: Php + Zend, MongoDB, Redis, REST API.

Devexi (8 month) – Large med database app.

Application which allows user query large health database using lots of filters, time ranges etc, and then work with received data, visualize it. I'm working on front-end with two other part-time developers. There are also about 5 people in backend team.

Technologies and tools: AngularJS, JQuery, Gulp, Bower, Karma, D3, Bitbucket, Java, Postgresql.

InstitutoSawabona (6 month) – MLM platform. System which organize and manage MLM (multilevel marketing) systems. I worked as lead front-end developer in team of 7 people, with 3 backend developers, system architect, selenium tester and IT director (manager). System is network with people, which are placed in large referral tree, according which they get different bonuses. Every user has one sponsor (referrer) and can has any number of refferals.

Technologies and tools: AngularJS, AngularUI bootstrap, JIT spacetree, Angular TextEdit, Metronic bootstrap theme, Grunt, Bower, Sass and Compass, Yeoman, Karma, Jasmine, Github, Trello, PHP, Symfony, MariaDB, Docker, Vagrant.

Evercom (6 month) - Service for corporate communications. This product is used by call center operators and integrates with IP-telecom. The system is storing all text messages, mails,

calls from and to user, managing text information about places and customers, working with maps and calendars.

Basically I've worked on front-end part, but often added stuff to backend.

Technologies and tools: Angular.js, HTML, CSS, Angular-ui, Bootstrap, PHP, MySQL, Git

Education

Math and cybernetics in Belarusian State University (Minsk) – 5 years.

Languages: English (reading, writing, speaking), Russian (native)
